A Scene From One of Our Blocks of

HYBRID TEAS

(EVERBLOOMING BUSH ROSES)

RADIANCE—A wonderful American production. Vigorous, upright, bushy plants bearing a continuous supply of very large, beautiful, light silvery pink to salmon-pink flowers on long stems. A good bedding variety. The most dependable pink and one of the best for this climate.

RED RADIANCE. HT (Gude Bros., 1916.) Big, globular flowers of deep rose-red on strong, individual canes which are freely produced all summer until frost. Foliage excellent.

MRS. CHARLES BELL. HT.—A sport from Radiance, and exactly like it in all respects, except its finer, softer color. Discriminating growers prefer it to its parents and it is widely planted. Throughout some sections of the country Mrs. Charles Bell, with Radiance and Red Radiance, are almost the only Roses planted.

FRANCIS SCOTT KEY. HT. (J. Cook, 1913.) Very large, light crimson buds and blooms of noblest form, very double (95 petals); slightly fragrant. Plant is erect, producing its massive blooms in great abundance; good foliage; quite hardy.

HADLEY. HT. (Montgomery Co., Inc., 1914.) A rich crimson-red flower with velvety texture, lovely form, and perfume. Moderate in growth and bloom.

CHARLES' K. DOUGLAS. HT. (H. Dickson, 1919.) Fine, long-pointed buds opening to large, loosely formed flowers of striking crimson-scarlet; slightly fragrant. Strong, branching growth and an abundance of healthy foliage.

GRUSS AN TEPLITZ. (Geschwindt, 1897.) Small to medium-sized double blooms of brilliant crimson with velvety shadings and intense fragrance. Blooms in open clusters with the utmost freedom throughout the whole season. Bush extremely vigorous and hardy.

Double Roses, Made June 19, 1930

COLUMBIA HT. (E. G. Hill Co., 1917.) Lively, bright pink, sweetly scented flowers of exquisite shape and strong stiff petals, deepening in color as they expand. Free flowering, good growth, and healthy foliage.

JONKHEER J. L. MOCK. HT. (M. Leenders & Co., 1908.) Carmine buds of gigantic size, opening very slowly to enormous blooms of deep carmine-pink against which the reflexing petals show an inner surface of silver-rose. Plant strong and healthy.

FRANK W. DUNLOP. HT. (J. H. Dunlop, 1919.) Very large buds and flowers of deep, brilliant rose-pink; very double and highly perfumed. Plants grow tall, with sparse foliage, and blooms freely.

OPHELIA. HT. (W. Paul & Son, 1912.) A creamy white and pale pink bloom with a glint of golden yellow in the folds of its petals; very fragrant. Plant of very strong and spare habit, producing its blooms very liberally.

MME. BUTTERFLY. HT. (E. G. Hill Co., 1918.,) Fine light pink buds and flowers, tinted with gold near the base of the petals, of exquisite shape and richly perfumed. Plant is strong, throwing up big branching sprays of bloom.

SUNBURST. HT. (Pernet-Ducher, 1912.) Fine yellow flowers, strongly suffused with orange at the center, fragrant, and well shaped. Plant spreading.

LUXEMBOURG. HT. Beautiful tapering buds of yellowish copper, blooms of bronze-pink and apricot, with a delicate, delicious perfume.

KAISERIN AUSGUSTE VIKTORIA. HT. (P. Lambert, 1891.) Well formed, creamy buds which develop slowly to blooms of absolutely perfect form, snowy white with a slight tint of lemon at center; fragrant. Plant moderately vigorous and hardy.

LADY HILLINGTON. T. (Lowe & Shawyer, 1910.) Slender, pointed buds and elegantly cupped flower of deep saffron-yellow, paling toward the edges and becoming lighter as they expand; fragrant. The plant is erect, with perfect foliage, but rather tender. Hardier than most Teas.

HYBRID PERPETUALS

ULRICH BRUNNER. (F. Levet, 1881.) Large, fairly full flowers of bright carmine-red, cupped form, and very fragrant. Strong, erect, smooth wooded bush, with large foliage. Blooms profusely in early summer.

GENERAL JACQUEMINOT. (Roussel, 1852.) Scarlet-crimson buds and clear red flowers of moderate size and excellent shape; deeply fragrant. Plant strong and bushy, 3 to 6 feet high; normal foliage, and sometimes blooms a second time.

J. B. CLARK. (H. Dickson, 1905.) Very large, light red blooms, shaded blackish maroon, globular, very double, slightly fragrant. Growth enormous (6 to 12 feet); average foliage; early bloom profuse but scarce later.

CAPTAIN HAYWARD. (Bennett, 1893.) Scarlet-crimson buds and flowers of exquisite form, not fully double, but very large and fragrant. Plant big and strong, and almost constantly in bloom.

PAUL NEYRON. (L. Levet, 1869.) Dark, lilac-rose blooms of immense fragrance. Quite vigorous, strong, almost smooth canes with tough, leathery foliage, particularly free and constant bloom.

FRAU KARL DRUSCHKI. (P. Lambert, 1900.) Pinkish buds and magnificent, snow-white blooms with deep, firm petals, forming a flower of un-impeachable shape, but without fragrance. Plant one of the strongest, grows 4 to 10 feet high; foliage normal; blooms freely and continuously.

POLYANTHAS

SOMETIMES CALLED BABY RAMBLERS

IDEAL. (J. Spek, 1922.) Small, dark scarlet blooms shaded with black, borne with tremendous profusion in immense, compact bunches. Plant quite vigorous, rather long-branching, continually in bloom.

MISS EDITH CAVELL. (Meiderwyk, 1917.) Small, semi-double flowers of brilliant scarlet-red, shaded darker, produced in big, compact corymbs by sturdy well-branched plants.

MME. NORBERT LAVAVASSEUR. (Lavavassuer & Sons, 1903.) Small, semi-double flowers of bright purple-crimson with a lighter center, borne in dense clusters on strong, profusely blooming plants.

Well known as "Baby Rambler," and the variety which made the Polyanthas popular.

ELLEN POULSEN. (D. L. Poulsen, 1912.) Rather large, fairly full flowers of bright, rose-pink, darker toward the edges and slightly fragrant. Large, compact clusters, borne profusely by a dwarf, bushy plant 15 to 18 inches high.

CECILE BRUNNER. (Mme. Ducher, 1881.) Small, exquisitely formed buds and flowers of light pink with yellow base in diffuse, graceful clusters. Foliage waxy and healthy.

KATHARINE ZEIMET. (P. Lambert, 1901.) Small, very double, pure white flowers, quite fragrant, borne in large clusters on vigorous, faithfully blooming plants.

GEORGE ELGER. The yellowish Polyantha, but suffers in severe winters if left outdoors. This makes a charming Pot Rose for flowering indoors during the winter. The tiny, perfectly formed buds are glowing yellow and produced very freely at all times.

F. J. GROOTNDORST. (DeGoey, 1918.) Small fringed flowers of bright red, produced in large clusters freely throughout the whole growing season. The plant is vigorous, up to 6 feet or more, with large, coarse foliage of superb quality.

Combines the flowers and everblooming habit of the Polyanthas with the Rugosa vigor. A most desirable shrub for specimens, or, kept about 4 feet high, it makes a fine ever blooming hedge.

PINK GROOTNDORST. (F. J. Grootendorst & Sons, 1923.) Clusters of small, fringed, clear light shell-pink blooms during the whole flowering season. A vigorous, bushy shrub, absolutely hardy, and constantly in flower.

CLIMBING ROSES

PAUL'S SCARLET CLIMBER—The brightest and purest red of all the Pillar Roses. Flowers are borne in clusters that retain their color until they fall, the color being intensified by the numerous yellow stamens. A vigorous grower and a good bloomer.

CLIMBING AMERICAN BEAUTY—The moderately fragrant rich, rosy, deep pink 3-4 inch flowers are produced in great numbers. It will succeed in almost any situation and makes a very vigorous growth.

SPECIAL NEW ROSES

PRESIDENT HERBERT HOOVER. HT.—(Coddington, 1930) This seedling of Sensation crossed with Souvenir de Claudius Pernet is a gorgeous combination of cercise, bronze and yellow. The outer petals are flushed with cercise, while its golden center of bronze and yellow is most enchanting. It is a wonderful grower, making stems 3 feet long, without pinching.

AWARDED GOLD MEDAL at the International Flower Show in New York, 1929, and New Jersey Flower Show, November, 1929; also Award of Merit by the Royal Horticultural Society, London, England, November, 19, 1929.

TALISMAN. HT.—(Montgomery, 1929) Cross between Ophelia and Souvenir de Claudius Pernet. The most vividly colored Rose ever introduced and exceptionally easy to grow. Its foliage is very fine and vigorous, untroubled by disease, and plant grows rapidly and blooms with exceptional freedom. The flowers have much substance and never lose their striking color entirely, although they are some lighter in unfavorable weather.

DAME EDITH HELEN. HT. (A. Dickson & Sons, 1926) Shapely buds and substantial, high-centered blooms of clear pink, sweetly scented and freely produced on long, strong stems. Vigorous. Most remarkable for the number and beautiful arrangement of its petals, and its color is always good. The best **EXHIBITION PINK ROSE** for the **SOUTH.** First prize above all varieties at 1929, Tyler, Texas, flower show.

Prompt, careful attention and friendly courtesies we haven't mentioned—but you will find, if you do not know, they go with our plants.

We solicit your orders in the honest belief that better plants are not grown by anyone anywhere. It is surely to your interest to test our claims and services.

We have always availed ourselves of every opportunity to improve our plants and to employ the best methods of placing same in the hands of our customers. As a natural result, our standard of quality is of the best and our service, weather permitting, is prompt, efficient and reliable.

These advantages together, with our well known policy of fair dealing, insures to our customers a most satisfactory business connection and some of the best plants grown.
